

Circular 17 - 2019

06 September 2019

Dear Resident,

Installation of Generator Electrical Reticulation

Evergreen will be installing a 60KVa generator next week to ensure that our village has electricity, no matter what the future holds in terms of power cuts or outages. This will guarantee that our street lights, emergency services and security installations that keep our village safe, are not compromised.

After considering various options, it was decided that the most viable location for the generator in terms of costs and electrical reticulation, would be opposite the clubhouse above the visitors parking. It will be securely fenced and surrounded by appropriate plantings to minimise its aesthetic impact. The installation will also involve roadworks along the main road to the pool area and into the "berm" area to complete the project.

The generator comes fitted with a noise reduction box and is currently stored in the visitors bay near to where it will be installed in its final position, which will commence shortly. The project should take no longer than a few days, during which time every effort will be made not to inconvenience our residents.

Your understanding and cooperation are greatly appreciated. If you would like any further information, please call me on Ext 201.

Yours faithfully

Christine Dempers
Village Manager
