

Spring: a lovely reminder of how beautiful change can truly be

Spring Day symbolises the transition period between summer and winter all around the world. In South Africa Spring Day falls on the 1st of September, and marks the end of the dreary cold winter days and the beginning of sunny summer days and nights. The longer daylight hours and warmer weather causes flowers to bloom and trees to blossom, welcoming the new season with brilliant colours and new leaves

Why The 1st **Day** of September is "**Spring Day**" 1446 days ago. Today, despite the weather, we celebrate **Spring Day**! But have you ever wondered why we do that on the 1st September? Many people think that it has something to do with the Equinox, but the true **Spring** Equinox only occurs on the 22nd September this year.

The actual reason might be a bit disappointing: in 1780 an international group of meteorologists decided to break the year up into 4 quarters, each one starting on the 1st March, 1st June, 1st September and 1st December.

Spring Time! When the earth laughs in flowers.
